Directions:

Read each of the story problems given below. Use blocks to solve the story problems. Write about how you solved the story problems by drawing pictures of your work, writing about your work, and providing answers. Be sure to explain your thinking.

1. There are 45 colored pencils in a package.
Three students must share the colored pencils evenly.
How many colored pencils does each student get?

2. This time you get to choose what the students are sharing so fill in the blanks about what they share and then answer the question.

There are 4 students that must share 64 _____ evenly.
How many _____ does each student get?

3. This time you get to choose what the students are sharing and how many students will share. Fill in the blanks and then answer the question.

There are 90 _____.
_____ students must share the 90 _____ evenly.
How many _____ does each student get?

4. This time you get to write your own sharing story problem. Be creative!
